DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1- 7, 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bar-Yona [US 6,226,906] in view of Chang [US Des. 421,722].

Bar-Yona disclose a display unit [figures 8-9] comprising: a housing [4] having a top portion and a base portion, wherein the top portion housed an lenticular lenses image display unit [8, 10] displaying at least two changeable images; an information display [clock 62; the clock could be digital column 4, lines 35-36].

Bar-Yona disclose the claimed invention except for the base of the apparatus being a shaped base portion having a length less than a height of the apparatus; where the shaped base portion supports the image and the information display in a substantially vertical orientation.

Chang discloses a rocking clock [figure 1] comprising a round base portion and a top portion; wherein the base portion having a length less than the height of the top portion; and wherein the top portion housed information display mechanisms.

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to use the rocking clock design of Chang with Bar-Yona for the purpose of providing rocking motion.

Application/Control Number: 10/053,383

Art Unit: 2841

Regarding claims 6, 7, 10 and 11, Bar-Yona and Chang disclose the claimed invention except for the weight distribution upon the top portion or the base portion.

The examiner takes official notice that both the concept and the advantage of weight distribution in a rocking device are well known and expected in the art. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have the upper portion of a rocking device weighted more than of the base portion thereof for the purpose of achieving appropriate rocking speed, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bar-Yona and Chang as applied to claim 7 above, and further in view of Kutosky [US 5,995,455].

Bar-Yona and Chang disclose the claimed invention except for the clock is one of an alarm settable to sound at a determined time and immediately upon user interaction.

Kutosky discloses an alarm timer device [figure 3] comprising alarm on/off switch [80].

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to use the alarming design of Kutosky with Bar-Yona as modified for the purpose of facilitating alarm at a preset time.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Calhoun, Jr. [US 3,686,781]; Norton et al. [US 5,169,354]; Herron [US 4,912,586]; Lin [US 6,165,041].
